

**HAVE YOU GOT SCARRING FOLLOWING A BURN INJURY?  
ARE YOU WILLING TO HELP US EXPLORE WHY SOME PEOPLE  
COPE BETTER THAN OTHERS?**

We are looking for adults (18 + years) to take part in our research study, which aims to investigate why some people cope better than others, emotionally, following appearance-altering burn injuries.

It involves completing some questionnaires about yourself, how you manage difficult thoughts and feelings and how you feel about your injuries. To take part in this research project it does not matter whether you feel distressed or not about your scarring. We would like to gather a range of people's experiences.

This study will take around 15 minutes in total.

You can find out more information and/or complete the questionnaires online via Survey Monkey through this link:

<https://www.surveymonkey.co.uk/r/2M57J69>

Alternatively, you can contact the Chief Investigator and ask for the questionnaires to be sent to you by post (with a pre-paid stamped addressed return envelope).

Your data will be anonymous and stored securely. The study has NHS ethical approval and is being conducted by psychologists at the Nottingham burns service.

For further information or queries please contact the research team:
